Research: Reinforcement learning (RL) and multi-task optimization, from small control policies to VLA models and LLMs

EDUCATION

University of California, Irvine **Irvine, CA**
Doctor of Philosophy (PhD) in Statistics; Advisors: Prof. Annie Qu, Prof. Rui Miao *Sep. 2024 – May 2028 (expected)*

Jilin University – School of Mathematics **Changchun, China**
B.S. in Mathematics and Applied Mathematics *Aug. 2020 – Jul. 2024*

PUBLICATIONS

TOPPO: Rethinking PPO for Multi-Task Reinforcement Learning with Critic Balancing. *NeurIPS 2026*
Yuanpeng Li, Gefei Lin, Annie Qu, Rui Miao. arXiv:2605.11473.

RESEARCH EXPERIENCE

TOPPO: Rethinking PPO for Multi-Task RL with Critic Balancing [code] **Irvine, CA**
First author; accepted at NeurIPS 2026; Advisors: Prof. Annie Qu, Prof. Rui Miao *Jul. 2023 – Apr. 2026*

- Identified ill-conditioned critic gradients as the key bottleneck in multi-task PPO: easy tasks dominate the critic and hard tasks stall.
- Proposed Critic Balancing (per-task PopArt, LayerNorm critic, FairGrad on the critic, PCGrad on the actor), proved that FairGrad's update is unchanged by positive per-task gradient rescaling, and sped up its solver 83× over SciPy.
- Set a new state of the art on Meta-World+ MT50 (90.9% mean, 56.5% worst-10-task success) over the strongest baseline, ARS-LN-1024 (85.7%, 43.3%, same protocol), with 22.7× fewer parameters, reaching the baseline's final mean in 28% of the steps.
- Extended Critic Balancing to a two-objective AMP humanoid task, cutting motion-style FID by 76%.

Scaling TOPPO to Large Models: VLA and LLM RL **Irvine, CA**
Advisors: Prof. Annie Qu, Prof. Rui Miao *Jun. 2026 – Sep. 2026*

- Set up RL fine-tuning of a 3.3B π_0 VLA model with RLinf, and built a GRPO/PPO pipeline for LLMs on verl, vLLM and FSDP2 with a 120B LLM judge as the reward model.
- TOPPO gave no clear gain on either model, unlike on small networks, which motivated the block-wise study below.

Block-Wise Gradient Balancing for Deep Multi-Task Networks (ongoing) **Irvine, CA**
Advisors: Prof. Annie Qu, Prof. Rui Miao; paper in preparation for TMLR *Aug. 2026 – Present*

- Benchmarked 26 multi-task gradient methods in one PyTorch trainer, reproducing published NYUv2, CelebA and QM9 results.
- Found that a few small early layers carry most of the gradient energy, so the whole-network gradient Gram matrix behind FairGrad's task weights mostly reflects them; in a QM9 message-passing network, the energy targets separate only at the readout layer.
- Proposed a norm-induced block kernel that balances each module's contribution to FairGrad's task weights. On a QM9 graph transformer it cut $\Delta m\%$ (average gap to single-task models) from 27.7 to 9.6.

Runtime-Aware HPC Job Scheduling (ongoing) **Irvine, CA**
With Prof. Rui Miao *Oct. 2026 – Present*

- Wrote slurmsim, a Python/C Slurm simulator matching real Slurm's job start order and 99.9% of sampled priorities exactly.
- Set each job's `--time-min`, which backfill plans with, from a Kaplan–Meier runtime estimate, keeping the user's limit as the hard cap; mean turnaround fell 8–18% in simulation and 8% in a national-lab trace replay, with almost no extra timeouts.

PROJECTS

RunFleet & **run-skills** | *Python, Bash, Slurm, MCP*

- Built a terminal dashboard for jobs and GPUs across Slurm clusters over SSH, plus skills that let coding agents submit jobs.

gradescope-mcp | *Python, MCP, uv*

- Built an MCP server that lets AI agents grade and edit Gradescope rubrics; every write is previewed and approved by a person.

TEACHING

- **Graduate Teaching Assistant**, UC Irvine Statistics (Sep. 2024 – Present): STATS 7, 67, 110, 120C, 205P.

AWARDS

- UC Irvine Statistics **Graduate Travel Award** ($2,500, 2026); Chinese Mathematics Competitions **National 3rd Prize** (2021)

SKILLS

- **Methods:** Reinforcement learning (PPO, GRPO), RLHF/RLAIF, multi-task learning (PCGrad, FairGrad, MGDA), LoRA/PEFT
- **ML Frameworks & Tooling:** PyTorch, Hugging Face, vLLM, verl, FSDP, RLinf; MCP servers, Claude Code / Codex skills
- **Infra & Engineering:** Python, C, Git, Docker, Linux, Slurm, Ray, W&B, uv, pytest
